FIELD NOTES CONTENT MODELLING

Your site breaks at handover.

The day the content team logs in.

ROBOTO STUDIO

01 THE PATTERN

Designers build pages. Editors publish things: products, people, case studies.

SWIPE

ROBOTO STUDIO

02 THE TELL

Fields named after the layout.

```
// schemas/homepage.ts
defineType({
  name: 'homepage',
  fields: [
    heroTitle,
    heroTitleLine2,
    section3Text,
    section3TextAlt,
  ],
})
```

03 SIX MONTHS LATER

WEEK 1

Marketing wants a new page

WEEK 2

No field fits, so they paste HTML

WEEK 6

The same case study lives in four places

MONTH 6

"We need a new CMS."

04 THE FIX

× PAGE MODEL

One homepage document with forty fields.

■ CONTENT MODEL

One case study type, used on six pages. Edit once, updated everywhere.

FOUNDER

ROBOTO STUDIO

05 THE RULE

Name fields after what they mean.

```
// schemas/caseStudy.ts
defineType({
  name: 'caseStudy',
  fields: [
    client,
    sector,
    outcome,
    services,
    quote,
  ],
})
```

ROBOTO STUDIO

06 BEFORE ANY DESIGN

Four questions for the editors.

01 What do you publish?

02 What repeats?

03 What links to what?

04 Who edits which part?

SWIPE >

07 THE ORDER

Design the content. Then design the pages.

ROBOTO STUDIO

08 SAVE THIS

Handover-proof in four rules.

- 01 Model types before pages
- 02 Name fields after meaning
- 03 Reference content, never copy it
- 04 Put editors in the Studio early
